Organization Overview

(Proposal 1)

The organization is named Petrichor Candles. Petrichor is the scent of the ground after it rains. It is quite a universally loved scent, but it could only be smelt after it rained. That was before Petrichor Candles. Now people can smell this scent at any time that they please just by lighting a candle. This business will have a website to reach as many people as possible, and the website is an investment as the business will eventually grow and expand to many more scents. The business' mission is to provide customers with candles that are of high quality while also being affordable for them. The company's mission is to build a good relationship with its customers; one of transparency and trust. The company's vision is to become a trusted and respected candle company. One of good quality and affordable prices. The company hopes to expand with more scents. Candle lovers, specifically those who enjoy the petrichor scent, are the target audience for this company.

Website goals and Objectives

Goals for this business' website include selling the candles and getting feedback from the customers on their experience with the website and the quality of the products that they received. The website is also meant to advertise the candles and inform the customers of sales. Key Performance Indicators (KPIs) will be used to measure the performance of the website. User engagement KPIs will be used to measure if there is engagement on the website and if users are interacting with the website. This will be useful as the company will be aware of the percentage of users leaving the website without interaction. The company will also be aware of the average number of pages that the viewers view, which will indicate if there is any site exploration. Acquisition and Awareness KPIs will be used as they will help to indicate to the company how people find the site, and it will also indicate the website's position in a search engine when certain keywords are searched. In this instance keywords such as "candle", "petrichor" or "candles company south Africa" could be used.

The website's objectives include:

- 1) Successfully attracting the customer's attention
- 2) Getting them interested in buying candles with the pictures
- 3) Creating an encouraging atmosphere that allows users to share any suggestions or queries.
- 4) Being easy to use for the user.

Proposed Website features and functionality:

The website will have four pages. It will have a home page, an about us page, a contact page and a product page.

Home page: The home page will advertise the products and inform the user of any sales. There will also be:

- 1) links/buttons on the home page: These links will take the user to the about us page, the contact page and the product page.
- 2) A picture: The picture will be of a candle to make it clear what is being sold on the website.

The product page: This page will be where the users can view the products and order them. This page will have:

- 1) Pictures: The pictures will advertise the candles, building an interest in the customers.
- 2) Forms: These forms are where the customer can input their name, the number of candles they want to order, and their address.

About us page: The About us page will have the company's history as well as the company's mission statement and vision statement. The only other feature that would be on this page is the video of the candle that plays when the customer plays it as they read. Functionality:

1) Video: Video of candle burning plays when the customer presses play as they read the business' history.

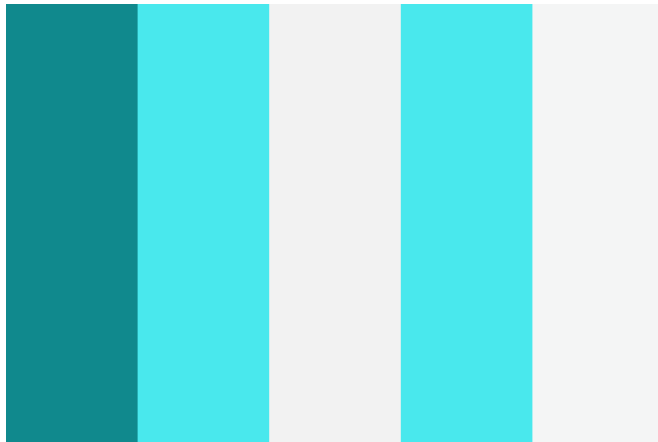

Contact page: The contact page will contain the company's phone number and email address. The contact page will also have a feedback form where the customers can give feedback on their experience and the quality of the products as well as to express any complaints.

Functionality:

- 1) Feedback form: For the customer to fill in and notify the business of any enquiries, complaints or reviews.

The design aesthetic of the website will be a white color as the candles will be turquoise. The candles will stand out with a white background, attracting the user's attention. The font will be black to also stand out from the white background. There will be a white and turquoise color palate. The website will have a Calibri font style for a classy and legible look. When it comes to the hierarchy, the name of the business will be in H1, the rest of the page will be in H2 to focus the user's attention on the name of the business. The navigation of the page will be easy for the user as the website will be clear and simple with buttons that have clear labels, helping the user understand how to utilize the website.

As provides by the color hex website, the color palette of the website would look like this:

The font of the website will be a black color that is in the Georgia, 'Times New Roman' font. For example:

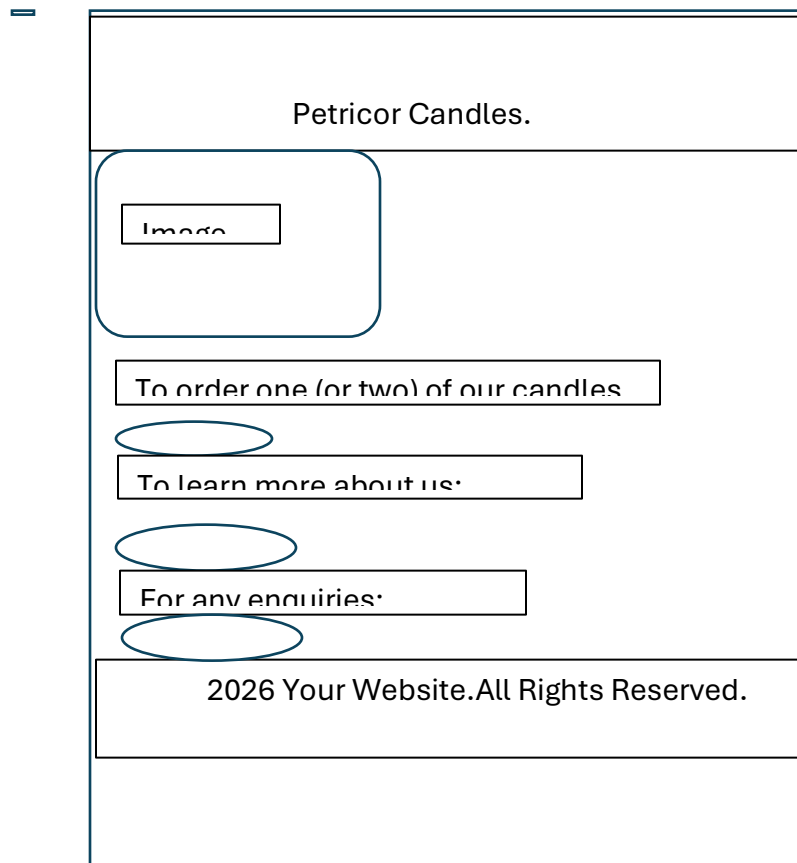

The quick brown fox jumps over the lazy dog.

Technical Requirements

To code my website, HTML, CSS, and JavaScript will be used. For the website hosting requirements such sufficient storage and bandwidth. Sufficient storage ensures that there will be enough space for files on the website. Sufficient bandwidth helps with online visitor traffic, ensuring that the website does not crash if there are many people on it at the same time. Domain name requirements for the website include availability and payment. No one can acquire a domain name that is already being used by another company, so before a domain name can be chosen, availability has to be ensured. Payment is also required to obtain and maintain a domain name.

Wireframe for homepage:

Timeline and Milestones:

	April 2026	May 2026	July 2026	February 2027	March 2027	June 2027
--	------------	----------	-----------	---------------	------------	-----------

Approval of Proposal						
Submission of Part 1						
Submission of Part 2						
Submission of Part 3						
Purchasing a web domain						
Purchasing a domain name						
Launch website						
Officially begin business						

Budget

The website will be hosted on a virtual private server as the server offers more control and resources than shared hosting does. This will cost anywhere from R1,500 – R3,000, so I will budget R3,000. To obtain the domain name, it will cost R74.75 per year. That will total R3,074.75 per year. I will save R6,500 before launching the website to be able to maintain the website for at least two years.

Organization Overview

The organization is an origami plant business. Customers can buy origami plants for their homes. There is a variety of flowers that are available including small flowers as found in gardens, bouquets, and life-size plants that usually decorate people's houses. The company's vision is to share their love of origami with plant lovers. To give people a unique decoration that is both beautiful and creative. The company's mission is to create as many plants as possible and to spread as much joy and creativity by doing so.

Website goals and Objectives

The business' goal is to sell origami plants and bouquets to customers. The customers can also request custom origami pieces even if they are not plants. The business wants to cultivate unique ideas. KPIs such as traffic by source and the average time a customer spends on a page will indicate the performance of the website. The traffic by source will inform the company of how customers are reaching the website. This will be crucial information. The average time a customer spends on a page will indicate if there is meaningful engagement or not.

Proposed Website features and functionality.

The website will have five pages. It will have a home page, a product page, a contact page, and an about us page and an enquiry page.

Home page: The home page will advertise the products. There will also be links/buttons on the home page that will take the user to the product page, the contact us page, an about us page and an enquiry page.

The product page: This page will be where the users can view the products and order them and also make custom orders.

About us page: The About us page will have the company's history as well as the company's mission statement and vision statement.

Contact page: The contact page will contain the company's phone number and email address.

Enquiry Page: This page will be for any complaints, questions or concerns that the customer may have that they would like to enquire about.

Design and User Experience

The design of the website will be extremely simple to not take away from the product. The product will be the main attraction of the website. There will be clear buttons and labels for simple navigation. The website will have a pastel color palette like most origami do. The website's background color will be white so that the pictures of the origami flowers will attract the customer's attention. The business' name "Paper Petals" will be in H1 hierarchy to stand out and catch the customer's attention. Everything else will be written in black and in H2 hierarchy.

Technical Requirements

A domain name and a website holding will be needed for the website. Website domain names typically cost R74.54 per year, which is quite affordable. A name that is not already being used is a requirement for a domain name and a website address. Website hosting requires payment and sufficient bandwidth to prevent the site from crashing.

Timeline and Milestones.

	April 2026	May 2026	July 2026	February 2027	March 2027	June 2027
Approval of Proposal						
Submission of Part 1
